61-10989

Trans. of Makromolekulare Chemie (Switzerland)
1960, v. 41, p. 86-109.

By means of microscopic investigations, the formation
of nuclei and the growth rate of isotactic polypropylene
were measured separately as a function of the crystal-
lization temperature, and the values ascertained in
this way were compared with the numerical data of the
over-all crystallization according to Avrami. The
values were excellently in line with theory. The varia-
tion of the growth rate with temperature followed the
Volmer theory, if allowance is made for the variation
of the melting point of the high polymer with the pre-
ceding crystallization temperature. As the
